Figure 1. A 1000 × 1000 pixel image showing a 2D convolutional neural network's internal representation of a handwritten digit. The image is composed of a grid of colored pixels, with each color representing a different feature or activation level. The digit '4' is clearly visible in the center of the image. The background is mostly black, indicating low activation for that feature.

...that will be required for the development of the new system.
